Application as an Underwriter, Health & MISC. (Casualty)

Dear Sir or Madam,

are you looking for a motivated, responsible employee with above-average mathematical talent?

In my previous work as a scientific assistant in mathematics I have dealt, among other things, with the comprehensibility of abstract objects and their geometry.

„Measure what is measurable, and make measurable what is not so.“ (Galileo Galilei)

In particular, giving presentations and the ability to communicate in order to explain the new knowledge to researchers and students in a clear and understandable way was indispensable. This includes good command of english combined with effective coordination.

In addition to my research activities I had tutoring obligations which cover many different mathematical branches: teaching statistic and stochastic methods to biologists, linear optimization to economists, complex differential geometry to pure mathematician and much more. Constant optimization and work responsibility have always been of utter importance to me.

I am used to work under pressure and defy challenges, because being a mathematician means solving problems, quick adaptability to new processes and analytical thinking.

Thank you for looking at my documents and I look forward to hear from you.

Yours faithfully,

Pascal Teßmer
