ABOUT ME

Hello, I am a third-year student majoring in Actuarial Science at Thammasat University. I have a strong foundation in both life and non-life insurance, along with knowledge of insurance-related laws in Thailand. My academic background also includes actuarial mathematics, which has helped me develop strong analytical and problem-solving skills. I enjoy working collaboratively and value the importance of teamwork in achieving shared goals.

I am currently seeking an internship opportunity in the Claims Department, as I am particularly interested in understanding the process of claims assessment and settlement. I believe this area plays a crucial role in delivering value to policyholders and maintaining trust in insurance providers. I am eager to apply my knowledge in a real-world setting and gain hands-on experience to support my professional development in the insurance industry.

Skills

Hard Skill

- Microsoft Office Suite (Word, Excel, PowerPoint)
- Python programming

Soft Skill

- Communicate
- Teamwork
- Responsibility
- Time Management
- Problem-Solving

EXPERIENCE

- Experienced in Python to predict the probability of intentional auto insurance claims using Logistic Regression analysis.
- Experience in new product development projects related to an app designed to facilitate the convenience of the single population.
- Completed a Microsoft Excel training program.
